GISS gloves come top for user comfort and usability, increasing plant hand safety

A leading recycling company had been looking for a suitable protective glove for their workforce for many years, with each new glove they tried bringing in a new set of issues. After assessing their problems, one of our category experts recommended the GISS Nitrile E Cut Rated Glove for four reasons:

- 1 As one of the highest cut rated gloves on the market, the customer could be confident that their team will be protected against glass or other sharp objects.
- 2 They provide high dexterity, so the team can easily use their protected hands to do even precision work.
- 3 They are comfortable to wear and this along with the dexterous nature of the design means that the team wear them throughout their shifts as required.
- 4 They were highly competitively priced so came well within their budget.

The gloves were a big success, with the company saying that their team really loved wearing them. As a result, they have been able to get staff to wear the gloves for longer periods of time to stay fully protected. This has eliminated the issues they were experiencing with people either changing gloves or not complying with wearing them on the line at all, ultimately reducing accidents and making their workforce much safer as a result.

|| This demonstrates the importance of comfort and dexterity, as well as protection, in gloves - getting people to wear them is key to ensuring the safety of the workforce. ||
